Here's a link to the initial demo app: Basically it's just a beautiful, minimalist web application that runs on the iPhone. I think it's really cool because it utilizes physics to display content in a fractal (proportional fractal) pattern. The app uses the iPhone's accelerometer to change the size of the pattern according to the device's orientation, and it also uses the iPhone's accelerometer to change the frequency of the pattern to compensate for the change in frequency of the accelerometer when the phone is tilted. That's it, simple. As an aside, I was experimenting with some image processing algorithms a few weeks ago and came across this paper (PDF) on a similar but much more complex proportional fractal pattern: [

.. wodsoft. A: Like Wikipedia says Scada is a software or hardware device used for process control applications. With that said, there is not a single word defined for this acronym. If this is a software package, Scada is the plural of Scada. If this is a device (which I doubt), it could be the name of the device itself. Regardless, it doesn't make any sense to name your product "Elipse Scada Hardkey Crackbfdcm", as it would be similar to saying "Espresso Machine Elipse Scada Hardkey Crackbfdcm" (you can see that I changed the letters for clarity here). The full name should be "Elipse Scada Hardkey Crackbfdcm 4671a75073". You need to decide on the product name first, and then come up with an acronym that fits your product. { "parameters": { "resourceGroupName": "testgroup", "storageAccountName": "mystorageaccount", "api-version": "2016-01-01" }, "responses": { "200": { "headers": {}, "body": { "name": "mystorageaccount", "location": "eastus", "kind": "Storage", "id": "/subscriptions/00000000-0000-0000-0000-000000000000/resourceGroups/testgroup/providers/Microsoft.Storage/storageAccounts/mystorageaccount", "type": "Microsoft.Storage/storageAccounts", "properties": { "accountType": "Standard_LRS", "creationTime": "2019-04-19T06:47:35.6759886Z", "primaryEndpoints": { "blob": " 2d92ce491b
