Rayman 2: The Great Escape (PC) - PC Games, free download. It's like they're having a kid. This is one beautiful game. After seeing the PC version more than a year ago, and the...Q: Java Socket programming I have a problem with the next code: The server program is executed by tomcat, and I need to use the parameters: userid, name and amount to transfer to the client to make some calculations. If the client wins the amount of money should be transferred. The client program is on two machines, that's why the socket port is different. The error is : java.net.SocketException: Connection reset. What is wrong? Server code: import java.io.BufferedReader; import java.io.IOException; import java.io.InputStreamReader; import java.io.PrintWriter; import java.net.ServerSocket; import java.net.Socket; public class ServerSocketServer { private static Socket s; private static ServerSocket server; public static void main(String[] args) throws IOException { s = new Socket("127.0.0.1", 6000); server = new ServerSocket(6000); while (true) { try { s = server.accept(); BufferedReader input = new BufferedReader(new InputStreamReader(s.getInputStream())); PrintWriter output = new PrintWriter(s.getOutputStream(), true); String[] values = input.readLine().split(" "); String userid = values[0]; String name = values[1]; String amount = values[2];
