AutoCAD

Interoperability: AutoCAD's AutoLISP, Visual LISP and VBA are designed to provide a user-friendly API. The language is similar to computer programming languages such as BASIC and Pascal, and to algebraic and declarative languages such as Lisp. The AutoCAD API provides a set of interfaces and commands that provides a simplified programming model to build applications that interact with the product, for example applications to create architectural layouts, building products, and installation instructions. The drawing engine on the PC side interacts with the AutoCAD API in the application. AutoLISP uses a different file format than the native AutoCAD format. AutoCAD is also available in German, Italian, Portuguese, Swedish, and Spanish. AutoCAD XPérsio was a discontinued interface, which was designed to interact with AutoCAD 2000 (and 2001) on Windows. D-Base D-Base is an engineering program developed by Sybex Corporation and originally released for the IBM PC in 1985. It was developed to create mechanical CAD drawings from wireframes and other CAD data. The program requires some training to use and it lacks 3D capability, although the basic design functions are available. Egret Egret is a computer aided design tool for architectural and engineering professionals to design and create architectural designs using open source software. It is one of the many free-to-use applications that are available on the App store. LinuxCAD LinuxCAD is a free CAD tool based on Qt library. It supports automatic 2D drafting and is developed on open source software such as GIMP and Inkscape. It is built for usage on Linux, Mac OS X and Windows, although Linux and Mac OS X are the two main target operating systems. Mobile drafting PTC Creo (formerly part of PTC and released as freeware in May 2013) is a cloud-based mobile CAD software used for creating 2D and 3D drawings. It has an app for Windows, iOS and Android. Paigale Paigale is a mobile app that was released in 2016 and used to create 2D drawings. It is a freemium app and an Adobe AIR based app. It is developed in French and the main language is English. How does it work? You are the director of the company's drawing department. You may be a designer, a drafter, or an AutoCAD user. You start a new drawing, using a new user name. You publish your drawing to Autodesk Design Review, where the drawings are available for other people to view. You begin to use a new drawing. Now, anyone in your organization can view the drawings that you've made. You can specify which users can view your drawings and how many views they are allowed to see. You can invite others to view your drawings, and let them edit the drawings. You can also add annotations to your drawings, provide related training materials, or mark up your drawings with content tags. When someone makes changes to your drawings, they are automatically seen and applied to all shared drawings. How does it work?
