Windows Services that display a notification in Session 0 (WinDbg Session 0) can trigger a prompt window if the Windows Service crashes or unloads. To see what Service is triggered, double-click the tray icon. You might want to create a batch file, and include the following: start sessreg and create a new registry key: HKEY_LOCAL_MACHINE\Software\Microsoft\Windows NT\CurrentVersion\Winlogon which is named: Sessions and set its value to: sessreg.exe Because, the name is a unique identifier for all Session 0 installations. And this will always prompt you with the exact session (0) that triggered the prompt. This should help you quickly identify the issue, if it is indeed a Session 0 issue. /* * Copyright (c) 2012-2017 Red Hat, Inc. * This program and the accompanying materials are made * available under the terms of the Eclipse Public License 2.0 * which is available at * * SPDX-License-Identifier: EPL-2.0 * * Contributors: * Red Hat, Inc. - initial API and implementation */ package

Blog If you've just started using an iPhone, you probably don't know any of the shortcuts. And with a smartphone that's big enough to take a photo of your belly button, it's easy to forget you can also type fast and even send short emails. So get ready to learn these shortcuts, and hopefully you won't need them as often as you think. Here are the shortcuts to remember. One of the coolest features of the iPhone is the multi-tasking feature. With your iPhone open, press and hold the Home button to cycle through open apps. You can use up to eight apps at once. You can also close an app by pressing and holding the app's icon in the App tray on the bottom of your iPhone screen. Arsenide (As₂S₃) molecularly imprinted polymer for fluoroquinolone antibiotics determination in human plasma and urine by HPLC-UV. A new fluoroquinolone (FQ) molecularly imprinted polymer (MIP) for determination of FQ antibiotics in human plasma and urine by HPLC-UV has been developed. The polymer was synthesized through a sol-gel process by using 4-vinylbenzyl-trimethylammonium chloride as a functional monomer and hexamethylene diisocyanate as a cross-linking agent. To determine the optimum conditions for the synthesis of MIP, different functional monomer/template molar ratio, addition of solvent and initiator, porogenic agent and catalytic core were studied. MIP was used as a solid-phase extraction (SPE) sorbent for extraction of FQ antibiotics from human plasma and urine samples. Parameters affecting the extraction such as the pH of sample and the time of extraction, temperature and desorption were optimized. MIP was analyzed by HPLC-UV. Method linearity was between 50 and 2500 µg/mL with correlation coefficients >0.9995. Limits of detection ranged from 8.0 to 12.0 µg/mL and limits of quantification were between 25 and 35.0 µg/
