That should do it! I was able to access your files via PowerDVD without any problems.Thanks for your input! Open your PowerDVD program and install the feature you want (this is the 5th link, so you may have to scroll to see it). Then open your files and see if it will play right away. If not, then try installing your DVD drive codecs (Purchased or free):. Open your PowerDVD and select ->Tools -> Codec Manager. (PowerDVD may be the default name of your codec manager on your system.) Select the open DVD drive and click the Install button. If all of that is successful, reboot your computer. My friend uses Avira and says he did the same thing. The only thing he had to do differently was install the feature not the codecs. But his was a free download from Avira so that shouldn't be an issue. And there is also another way to load PowerDVD that has worked for me as well. You can open your PowerDVD and select ->Tools -> Customize -> Add-ons ->Select the add-on you wish to use ->Install. From there, press ok and then reboot your computer. If you don't want to reboot then select reboot now. I would have no doubt that you could get PowerDVD to work with the installation method you used, but since you're asking, I figured I would provide the alternative method. Good luck and let me know if you succeed. Note: Be sure to download and install the PowerDVD codecs. It's possible to install the codecs after you install the add-on, but it's recommended you install them at the same time. For more info on installing codecs, see the PowerDVD guide. you all do know there are videos and there are video. i want to download the videos from this site and i have the problem with the dvds says "the disk is not clean" also the pc froze and nothing could continue that made the dvd read doesn't work, i searched the net and it showed that you must get the dvds that have an unlock code and dont know how can i get those codes? please help im beginner I've been using PowerDVD for a while and with v7 my only problem was in the facts section where I couldn't extract v1 or v3 files. It was fine in PowerDVD with v2. If I remember
