The purpose of this study was to assess the effect of genistein (GT) on chronic renal failure (CRF) in both animals and humans, and to determine the mechanism of this effect. We also examined the role of GT on plasma creatinine (Cr) and blood urea nitrogen (BUN) levels in CRF rats. 32 adult male Sprague-Dawley rats were divided into two groups, CRF and control groups. The CRF group received 1% adenine sulfate in their drinking water for 4 weeks, and then was treated with GT at 80 mg/kg body weight for 4 weeks. The control group was maintained on normal drinking water during the experiment. Blood samples from both the controls and CRF groups were taken at the end of the experiment to analyze Cr and BUN. After the rats were sacrificed, their kidney tissue was dissected out for further analysis. Plasma samples from both the controls and CRF groups were harvested to measure Cr and BUN levels at the end of the experiment. From the results obtained, it was found that the rats that received GT had significantly decreased Cr, BUN and proteinuria levels and did not exhibit significant changes in the BUN/Cr ratio and kidney weight compared to the CRF group. Thus, we concluded that, in this chronic rat model of CRF, GT not only prevented the development of uremia and inhibited the progression of renal dysfunction, but also had no adverse effect on kidney function. In addition, our data suggest that the action of GT on rat kidney is not mediated via a blockade of the angiotensin system./* * Copyright 2012 Netflix, Inc. * * Licensed under the Apache License, Version 2.0 (the "License"); * you may not use this file except in compliance with the License. *

A direct current (DC) cable for conducting electricity with a safety fuse which is used for a direct current power supply (commonly called a safety fuse) of a high-power load is known and used. The apparatus for supplying the electricity by connecting a load to the DC cable has a unique structure in which, when the current flowing from the load side goes through a safety fuse, the fuse blows. Thereby, the safety fuse is prevented from being a factor of stopping the supply of electricity to the load side
